RhinoGold®

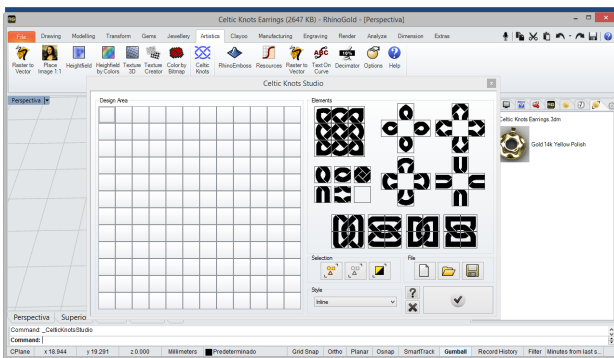

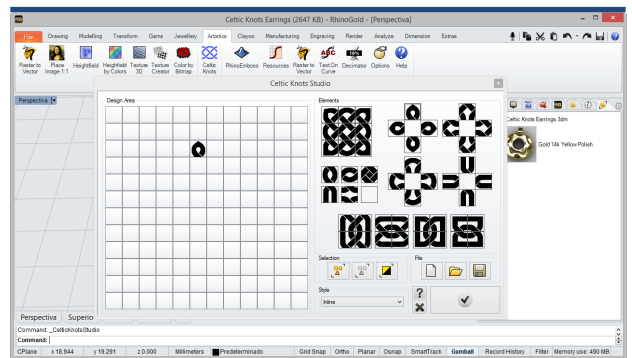

Celtic Knots Earrings

In this tutorial we are going to try some of the more useful commands in RhinoGold. Powerful tools such as Celtic knots, Pipes and Findings.

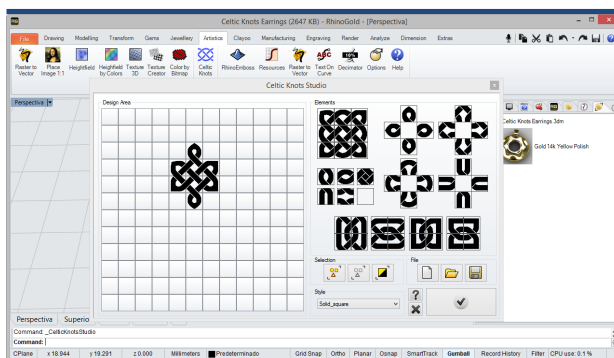

1 **Celtic Knots**

First select the Celtic Knots tool, within the Artistic tab.

2 **Celtic knots Studio**

Then, we will see the working table of this tool, on the grill is where we create our composition, we will select the area where the knot will be located. On the right we see the gallery where we'll select different knots.

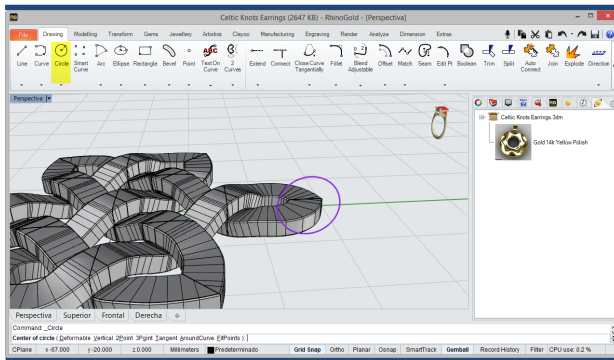

3 **Celtic Knots Studio**

After creating our composition will open the style tab and select "solid-square" to define the design as a solid.

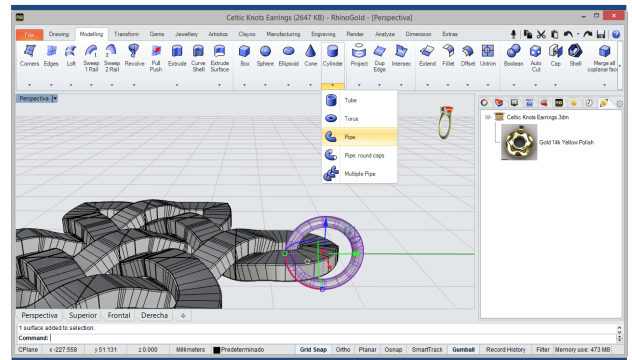

4 **Scale**

After creating the solid we will scale with the Scale tool, in the Transform tab or use the Gumball. we'll scale to a height of 30mm.

5 Circle

Next, we define a circle to the top knot with the Circle tool, on the Drawing tab, as shown in the image above.

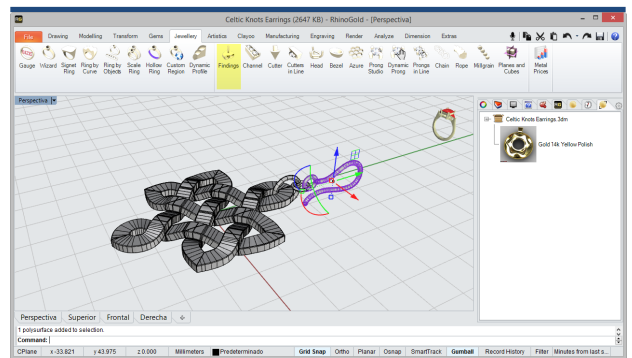

6 Pipe

In this step we will apply the Pipe tool to the circle created earlier. This tool is located within the cylinder submenu in the Modelling tab.

7 Copy

Now we copy the pipe from the previos step with the Copy tool, in the Transform tab and will position as shown in the image.

8 Findings

Finally, we'll select a finding with the Finding tool within the Jewellery tab. In this case we will choose the "Earring finding 2".
